

NetTickIT NOW - the agile ticketing solution

NetTickIT NOW software from Pierhouse has been designed for retailers who want to significantly improve sales and internal processes by implementing a simple to use and agile ticketing system that meets their fast changing business needs. NetTickIT NOW is SaaS based and contains all of the features of classic NetTickIT software but with three important differences.

- » No upfront costs so very fast ROI and no capital expenditure
- » One monthly licence fee covers everything, including: implementation charges, free use of standard templates, all software upgrades, all hosting costs, all maintenance and support
- » Optional Managed Print Services with efficient new printers

The power of NetTickIT NOW

NetTickIT NOW automates all of your ticketing and Point of Sale (POS) artwork, cutting production time from days to minutes. Head office staff can make decisions on price and offers and have new tickets and POS printed in stores within minutes, fully on brand and legally compliant. NetTickIT NOW dramatically reduces the number of templates required and ensures that each store can only see what's relevant to them. With our smart templates we typically reduce the number of templates used by a factor of 10 or more meaning it's no longer a challenge to select the correct template every time – NetTickIT NOW does it for you.

Is NetTickIT NOW right for you?

For the vast majority of retailers the answer is yes. Pierhouse have simplified the setup options in NetTickIT NOW making it easier and quicker for you to get operational fast. We'd **love** to tell you more about how NetTickIT NOW works and what it costs.

10 Key Benefits

- POS, prices, offers and reasons to buy can be updated in minutes across the whole estate
- On-brand consistency with automated artwork and full version control
- NetTickIT NOW scales from a handful of stores to thousands with the same software
- Promotional compliance with full approval and audit capability
- Integrated signage management for all paper tickets, POS, Electronic Shelf Labels and screens
- In sync prices and offers at all points in the store resulting in better sales
- Each store only gets the printed tickets and POS they need, no unnecessary wastage
- Store productivity increases by simplifying processes
- The most current ticket or offer generated on demand every time, at any time
- No more abbreviated product names on shelf tickets and promotions
